

Antenna/Pole

- 1.) Dig a hole approx. 2 feet deep and 4 feet from the manhole so that the antenna cable will be underground (If necessary) and there is enough cable to attach to the M80.
- 2.) You may want to dig a trench for the antenna cable.
- 3.) You will have to drill a hole in the side wall of the manhole vault usually just below the metal ring and feed the antenna cable through to the M80.
